+91 8968916714 | [Email](#) | [LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [CodeChef](#)

Final-year Computer Science student at Thapar University with strong backend and problem-solving skills, rated LeetCode Knight 2145, top 1.7%, CodeChef 4-Star, and 500+ DSA problems solved. Built full-stack systems using Next.js, TypeScript, PostgreSQL, MongoDB, Redis, AWS EC2, Docker, and REST APIs, with experience in workflow automation, API integrations, and scalable backend design.

EDUCATION

Thapar Institute of Engineering and Technology

Bachelor of Engineering in Computer Science (CGPA: 8.2/10)

Patiala, Punjab

2022 – 2026

Gobindgarh Public School

Class 12th CBSE 94.2%

Mandi Gobindgarh, Punjab

2021

EXPERIENCE

Engineering Intern

Mar 2026 – Present

Adaptware Solutions Pvt Ltd. (Relcu)

- Built and maintained **50+ CRM automation workflows** for Relcu using **Workato**, integrating apps such as **Twilio, email, webhooks, and CRM APIs** to automate backend business processes.
- Implemented event-driven workflows for lead communication, notifications, and data synchronization, reducing manual operational effort and improving process reliability.
- Debugged workflow failures, optimized API payload handling, and improved error tracking across automation flows to ensure smoother execution and faster issue resolution.

TECHNICAL PROJECTS

Smart Expense Splitter | *Next.js, TypeScript, PostgreSQL (Neon), NextAuth, Docker*

[Github] | **2026**

- Engineered a full-stack expense management platform supporting **Equal, Exact, Percentage, and Itemized** splits with precise financial workflows.
- Validated the **penny-accurate settlement system** across **1000+ generated expense cases** to ensure accurate balances and eliminate floating-point inconsistencies.
- Implemented a **greedy settlement algorithm** to minimize transactions, improving settlement efficiency across complex group expense scenarios.
- Built a maintainable backend using **Next.js API routes, service-based architecture, PostgreSQL, and NextAuth**, and containerized the application with **Docker** for consistent deployment.

ELC (I-Qube) Connect | *Next.js, Tailwind CSS, MongoDB, TypeScript, Node.js, Redis*

[Github] | **2025**

- Designed a backend-driven room booking system handling **100+** daily requests, eliminating manual paperwork and streamlining approval workflows.
- Designed role-based access control (Super Admin, Admin, Faculty) with JWT-based authentication, cutting booking turnaround time.
- Optimized backend performance using Redis caching and efficient MongoDB queries, reducing API latency and supporting **100+** daily room bookings reliably.
- Deployed the full-stack application on AWS EC2 using Nginx and PM2 for reliable access.

TECHNICAL SKILLS

Languages: C++, TypeScript/JavaScript, SQL

Backend & Systems: Node.js, REST APIs, PostgreSQL, MongoDB, Redis, NextAuth, Webhooks, Workato

Cloud & DevOps: AWS EC2, AWS S3, Docker, Nginx, Git

Frontend: Next.js, Tailwind CSS

Problem Solving: 500+ problems | LeetCode **2145** | CodeChef 4-Star (**1919**) | Codeforces (**1511**)

Core CS: DSA, OS, DBMS, CN, OOP

ACHIEVEMENTS

INR 3 Lakh Merit Scholarship (Thapar University)

Global Rank 25 – CodeChef Starters 216

Global Rank 181 – LeetCode Biweekly Contest 173
